

Bucket Truck Training Oakville

Bucket Truck Training Oakville - The bucket truck training program is a program which is designed to effectively train qualified operators so they can lessen the possibility of incident and personal injury when working in close proximity to or with bucket trucks or vehicle-mounted aerial work platform. An aerial lift device is whichever vehicle-mounted device, articulating or telescoping, or both, which is made use of to position workers to reach places which will otherwise be not accessible. Aerial lift devices are utilized to be able to elevate employees to above-ground work locations.

The objective of the program is to provide operators with the skills, knowledge, abilities, and training materials needed in order to learn to operate vehicle-mounted aerial work platforms safely and effectively.

The program has two components: a classroom training session and a hands-on training session. To become certified, participants must be successful in both parts. A wallet-size certificate and a full-size certificate will be issued upon completing the program.

Kinds of lifts comprise extensible boom platforms, articulating boom platforms, aerial ladders and aerial ladder trucks, vertical towers and any combination of these devices. Aerial lift devices are normally constructed with wood, metal, fiberglass, reinforced plastic or other materials.

Definitions

Articulating boom platform: multiple hinged boom components.

Extensible boom platform: has either an extensible boom or a telescopic boom.

Platform: part of the aerial device which is designed to carry personnel.

Mobile unit: any aerial device together with its components such as vehicle and related equipment.

Employers have the responsibility to ensure their employee get correct training prior to operating aerial devices. Workers should make certain they also receive the required training and that they do not operate lift devices if they are not authorized to do so. Workers should make certain that they put on the proper protective equipment if working from the platform.

Course content consists of operating the vehicle-mounted aerial work platform, safe operating practices, pre-shift inspections, use of emergency controls, lifting capacity, and administering theory and practical tests. Operators will learn legal requirements under the federal and local regulations.
